

1- Introduction

Climate change is one of the most urgent problems facing the world today, and electric power companies play a critical role in addressing this issue. To effectively address climate change, electric power companies must adopt a comprehensive and multifaceted approach that includes reducing emissions, increasing the use of renewable energy sources, and implementing energy efficiency measures.

AAA Renewable Energy is aware of its commitment to the environment, in particular its commitment to combat climate change. This Climate Policy reflects Aydem Renewable Energy's global goals and values regarding climate change.

2- Scope

The Climate Policy will be implemented in Aydem Renewable Energy and its subsidiary companies under our management and control.

3- Objectives

- To develop and monitor climate change management strategies and transition plans to achieve the ultimate goal of "net zero emissions."
- To integrate climate change management strategies into current operations and future investment plans.
- To engage in transparent and responsible sharing with stakeholders regarding climate change management.

4- Policy Statement/Principles

- 1) The ultimate goal of climate action is to achieve "net zero emissions." We will set ambitious targets to reduce greenhouse gas emissions and track progress toward these goals.
- 2) We will foster awareness and engagement among our employees regarding climate change by establishing individual targets and incentives, making it part of our corporate culture.
- 3) We will continue to invest in research and development to support the development of new clean energy technologies. In this regard, we will collaborate with academic institutions and research organizations working on clean energy projects.

- 4) We will address the impacts of climate change on our operations and infrastructure by planning and implementing energy efficiency measures, thereby helping to mitigate the effects of climate change. These measures will include strengthening buildings and equipment to make them more energy-efficient, as well as providing training and resources to customers to help them reduce their energy consumption.
- 5) We will publish annual sustainability reports and make information on emissions and renewable energy sources publicly available.
- 6) Carbon pricing is an effective way to reduce emissions and promote clean energy. We will support carbon pricing policies through lobbying efforts and by incorporating real or virtual carbon pricing into our decision-making processes.
- 7) We will collaborate and get into partnerships with other stakeholders to effectively address climate change. We will work with governments and non-governmental organizations (NGOs) to develop and implement climate policies.
- 8) We will consult local communities on the construction of renewable energy projects and provide educational resources to help them understand the benefits of clean energy.
